

Boeing Company Scholar

Sean Jolly

Virginia Beach, VA

University of Virginia

2021-2022: Sophomore

Major: Aerospace Engineering

Receiving the Wings Over America scholarship will allow me to focus all my energies on my studies, without being concerned with the financial aspects of my education. This scholarship supports all my goals of being able to complete my Aerospace Engineering major, which will lay a solid foundation for my career in the space industry. I see the space industry as becoming both wide-ranging and far-reaching in areas of advanced communications, inter-planetary exploration, mining operations, space and leisure travel, off-Earth colonization (both terrestrial and space-based), and so-forth. The potential is almost limitless. With an Aerospace Engineering degree, I hope to be part of the team and industry which builds permanent human bases on the moon and on Mars. All my life I have worked hard to learn as much as I could about aviation and space, and then share that information with others. This scholarship will help me to continue sharing my growing knowledge with others who have an interest in aviation, space, and science.
