- ❖ Engineering Team, Head of Marketing
- ❖ Volunteer: Pensacola Humane Society, Teacher assistant at Scenic Heights Elementary
- ❖ Year- Round Employment: Middle School Math Tutor

I am truly thankful for being selected to receive the 2019 Wings Over America Scholarship. This scholarship is giving me the opportunity to pursue a degree in electrical engineering at Florida Polytechnic University in Lakeland, Florida. I am grateful for the financial assistance I am receiving from the Wings Over America Scholarship Foundation and the support that they are providing me. This scholarship will allow me to focus on my academic studies at college while receiving exceptional grades in the engineering field. I hope to continue to grow academically and learn new ways to help improve my community using science, technology, engineering, and mathematics. My future goal is to use my skills and talents to pursue a career in innovations to help society and eventually work for a company that focuses on energy production. Eventually I plan to use my education and join the military one day and help develop ways to upgrade equipment and technology while serving my country. The Wings Over America Scholarship will be assisting me in obtaining these goals, which is why I am very honored to have received this award.
